This bulletin includes the updates from the Early Warning Reporting System (EWARS). It includes data since January 2015 till date, including comparison of same period during last year.

Section 1: The Early Warning and Reporting System (EWARS)

Highlights

- Two cases of Kala-azar are reported this week, one each from United Mission Hospital, Palpa and District Hospital Sarlahi. The cases are from Gulmi and Sarlahi district.
- Last year, the cases of AGE peaked on week 17, so it is important to remain alert for new outbreak.
- No case of Dengue and Malaria is reported this week.
- No death due to SARI and AGE is reported this week.

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. They can also support local level health institutions for investigation and outbreak control activities.

This information system is hospital-based and is currently operational in 48 hospitals (out of 81 sites) throughout Nepal (Figure 1). So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one week period.

1.1 Acute Gastro-Enteritis and Cholera

329 cases of AGE are reported in 15th epidemiological week of 2016. Among 329 cases, the majority of cases are from Kanchanpur (56 cases), Morang (27 cases), Jhapa (26 cases), Bardiya (26 cases), Dhading (19 cases), Rupandehi (18), and Kathmandu (18 cases) district. The number of AGE cases reported in 15th week this year exceeds the number of AGE cases reported in the same week last year (286 cases). Last year, the cases of AGE peaked on week 17, so it is important to remain alert for new outbreak.

No death from AGE is reported this week. Five deaths from AGE are reported so far this year.

Cholera: No cholera cases are reported through the EWARS system this year.

1.2 Severe Acute Respiratory Infection (SARI)

158 cases of SARI are reported in 15th epidemiological week of 2016. The cases of SARI reported this week did not exceed the number reported in the same week last year (181 cases). Among 158 cases, the majority of cases are from Morang (21 cases), Jhapa (17 cases), Rupandehi (12 cases), Lalitpur (13 cases), Dhading (13 cases) and Saptari (10 cases) district.

No death from SARI is reported this week. Twenty three deaths from SARI are reported so far this year.

1.3 Enteric Fever

22 cases of enteric fever are reported this week including 3 from Morang, 3 from Lamjung, and 2 each from Jhapa, Dhading, Palpa, Siraha, Surkhet and Tanahu district. The number of cases of enteric fever was peaked in week 37 in 2015 (71 cases).

1.4 Malaria

No case of Malaria is reported this week. Only two cases of malaria are reported so far this year. Ninety cases of Malaria were reported through EWARS in 2015.

1.5 Dengue

No case of Dengue is reported this week. Only one case of dengue is reported so far this year. Fifty-eight cases of Dengue were reported through EWARS in 2015.

1.6 Kala-azar

Two cases of Kala-azar are reported this week, one each from United Mission Hospital, Palpa and District Hospital Sarlahi. The cases are from Gulmi and Sarlahi district. Twenty nine cases of Kala-azar are reported so far this year. 135 cases were reported through EWARS in 2015.

Acknowledgement

The Epidemiology and Disease Control Division highly acknowledges the contribution from all the medical recorders, EWARS focal persons, rapid response team members and support from WHO and NHSSP for preparation of this bulletin.

Timeliness & completeness of reporting from sentinel sites:
